

## AMENDMENTS TO THE CLAIMS

### Claims 1-10 (Cancelled)

11. (currently amended) A rotational filing system for storing and retrieving a compact disk, comprising: a plurality of disk-shaped pouches and a disk-shaped pouch that is sized for the containment of an associated compact disk and a means for support which rests on a horizontal surface, wherein each said disk-shaped pouch is included in [[a]] said plurality of said pouches that are is adjacent to one another and ~~rotate~~ rotates about a common axis of said support means, each said disk-shaped pouch having at least one tab for including indicia in reference to said associated compact disk and extending beyond the periphery of said associated compact disk..

12. (currently amended) The rotational filing system of claim 11 wherein said means for support is a housing which includes said plurality of disk-shaped pouches, said housing being adapted for the free rotation of said plurality of disk-shaped pouches about said common axis and said common axis ~~which~~ is parallel to said horizontal surface.

13. (withdrawn) The rotational filing system of claim 11 wherein said means for support is a spindle attached to a base so that said common axis is perpendicular to said horizontal surface and said disk-shaped pouch and compact disk have congruent spindle center holes which are engaged by said spindle while said pouch contains said compact disk.

14. (currently amended) A disk-shaped pouch, comprising: a first disk-shaped side and a second side that are attached evenly to form a pouch for the containment and removal of an associated compact disk having a center hole, said first disk-shaped side having [[a]] at least one tab for including indicia in reference to said compact disk and extending beyond the periphery of said associated compact disk.

15. The disk-shaped pouch of claim 14 wherein said pouch has at least one center hole that is congruent to the center hole of said compact disk while said pouch contains said compact disk
